

■ Extracted Tasks

- Patient to be called on Post-Op Day 1 to assess recovery status
- In-clinic review to be scheduled for Post-Op Day 7 with the operating surgeon
- Drain removal to be coordinated if output is less than 10 mL/day
- Contact will be made by phone initially, with SMS as a backup
- Receptionist Angela has been assigned to coordinate the follow-up actions

■ AI Risk – Low Risk

- Patient to be called on Post-Op Day 1 to assess recovery status
- Contact will be made by phone initially, with SMS as a backup
- Receptionist Angela has been assigned to coordinate the follow-up actions

■ AI Risk – High Risk

- In-clinic review to be scheduled for Post-Op Day 7 with the operating surgeon
- Drain removal to be coordinated if output is less than 10 mL/day

■■■■ Human Review – Low Risk

- In-clinic review to be scheduled for Post-Op Day 7 with the operating surgeon

■■■■ Human Review – High Risk

- Drain removal to be coordinated if output is less than 10 mL/day
